Bongiovi DPS Plugin

This Program is particularly created to enhance the quality of the sound transmitted to your receiver. Using the Bongiovi DPS Plugin's presets, you can adjust the frequency of the audio signals coming out of your amplifier, mini, portable, or car CD's. Each preset has a special effect on the sound, whether it be a reduction in high frequencies, a slight increase in low frequencies, a reduction in the bass, or a more even distribution between all of the audio frequencies. The presets are given a unique color, so it is easy to see and select the presets that best suit your needs. The Color of the Presets The 3 Presets have been created to appeal to the most common users of our Hardware Unit. Each preset provides the user with the right balance of frequency response, bass response and even distribution between all audio frequencies. The presets are: Clear Music Preset 1: 2A, 20Hz, 100Hz Preset 2: B, 100Hz, 300Hz Preset 3: 2B, 70Hz, 180Hz The Color of the presets Red: High frequency reduction Red: Bass reduction Orange: High frequency, Low frequency and bass proportioned in the same proportion as the bass woofer Green: High frequency and bass proportioned the same as the mid woofer Blue: High and mid frequencies that are equal to the treble woofer Purple: The high and mid woofers out of phase and the bass in phase with the bass woofers White: High and mid frequencies are out of phase and the bass frequencies are equal to the bass woofer **Please NOTE ** this will dramatically reduce the performance of your equipment - it is a system for testing purpose ONLY. Invisible Voice 1.6 Voice-over-Internet Protocol (VoIP) is the conversational voice communication technology used primarily for over-the-Internet telephone calls that can be made using a computer, a software application, or a mobile phone. V-o-I-P features an alternative route for phone calls so that calls do not travel through the traditional public switched telephone network (PSTN) via telephone exchanges and central offices. The application performs the actual transmission and

The application features a pretty modern and visually appealing design. Available settings you can make use of are stored in a compact interface, emphasized through clearly visible and intuitive buttons. Taking roughly about 10 Mb of space on your hard disk drive and using little of your system's resources, technical details are not something to worry about. Moreover, you only need to bring up the main window when you need to change settings, being minimized to the system tray otherwise. Choose an output suitable for your activities Three major presets can be selected from the main window, depending on the output device. If you are using headphones, selecting the homonimous option adjusts several frequencies to enhance sound. Additionally, the same can be done for desktop speakers or an audio system, as well as for built-in speakers. Previously mentioned output settings can be further combined to perfectly blend in with listening to music or watching your favorite movie. Accessing the preferences menu gives you even more possibilities to enhance sound. Each output comes equipped with several dedicated profiles you can select. You also gain access to a slightly shallow equalizer. It is a pity that options limit you from customizing frequency sliders as you see fit or even save personalized profiles. To end with Taking everything into consideration, we can say that Bongiovi DPS Plugin is a handy application that certainly manages to enhance your audio experience. Available presets cleverly apply to various activities. It spends most of its time hidden in the system tray and it's easy to use, making it worth a try.
